RESCUE STEPS

- Rescuer enters, makes their way to the entrant, states “at entrant’s side” and reports on the condition of the injured entrant to the attendant.
- If necessary, the rescuer treats the injured entrant in the space.
- The rescuer attaches a lifeline to the entrant or packages the entrant if it is a horizontal rescue.
- Rescuer then directs the attendant using “Up”, “Down”, or “Stop”.

“Down”

(Full Speed,
½, ¼ Speed)

“Up”

(Full Speed, ½,
¼ Speed)

“Stop”
